

AGRICULTURAL SOIL ANALYSIS REPORT

Sample Report 02 — Created for Soil Report Upload Testing

Report No.	LAB/TS/2026/1048	Sample Date	28-Sep-2026
Farmer	Suresh Naidu	Sample ID	SOIL-AP-0287
Village	Mylavaram	District	NTR
State	Andhra Pradesh	Crop	Cotton
Sample Depth	0–20 cm	Soil Type	Red Loamy Soil

Laboratory Results

Test Parameter	Observed Value	Unit	Rating
pH	7.4	pH	Slightly Alkaline
Electrical Conductivity	0.86	dS/m	Normal
Organic Carbon	0.42	%	Low
Available Nitrogen	198	kg/ha	Low
Available Phosphorus	12.4	kg/ha	Low
Available Potassium	312	kg/ha	High
Available Sulphur	9.8	mg/kg	Low

Micronutrient Analysis

Micronutrient	Value	Unit	Status
Zinc (Zn)	0.54	mg/kg	Deficient
Iron (Fe)	4.3	mg/kg	Sufficient
Manganese (Mn)	2.7	mg/kg	Low
Copper (Cu)	0.39	mg/kg	Sufficient
Boron (B)	0.31	mg/kg	Low

General Soil Management Suggestions

Parameter	Suggested Action
Nitrogen	Consider nitrogen supplementation according to crop recommendation and growth stage.
Phosphorus	Phosphorus level is low; apply a recommended phosphorus fertilizer dose.
Potassium	Potassium is already high; avoid unnecessary potassium application.
Organic Carbon	Increase organic matter through compost, farmyard manure, or suitable crop residues.
Zinc	Zinc is deficient; use a locally recommended zinc fertilizer dose.
Sulphur	Sulphur is low; consider sulphur-containing fertilizer where appropriate.

Important: This is a fictional sample document intended only for testing soil-report upload, OCR, parsing, and recommendation features. It is not an official laboratory report.
